

SMALL STEPS TO BIG CHANGES

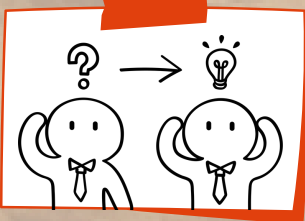

MAXIMISING PATIENT CARE THROUGH DIGITAL TOOLS!

Strategies for increasing awareness of digitalised resources among our nurses

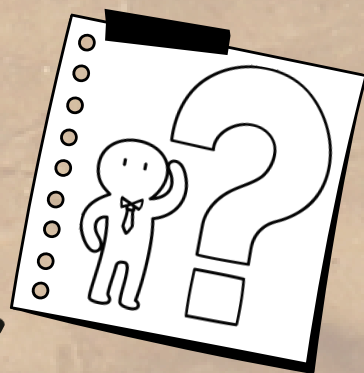

Nursing @ Diabetes & Endocrinology Clinic

CHALLENGES

- Limited access to diabetes resources often results in nurses relying heavily on Diabetes Nurse Educators (DNEs).
- Stronger reliance on the DNEs prolongs discharge procedures, particularly on weekends and holidays.
- Patients may leave the hospital without the essential diabetes resources. This increases the challenges on self-management.

IMPLEMENTATIONS

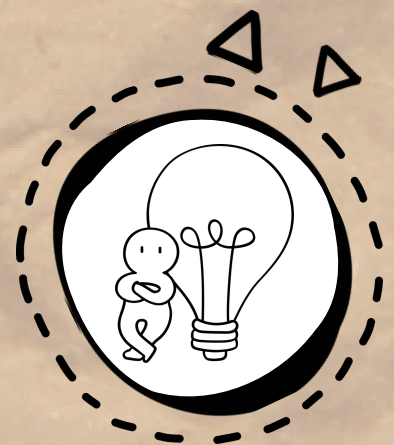

Create a visual poster for easy access and utilisation of resources

Nursing leaders will cascade the information via email, detailing the how and where to access digital resources.

Encourage nursing leaders and staff to spread the word about the poster

OUTCOMES

- **Reducing nurse reliance** on Diabetes Nurse Educators (DNEs) leads to **increased nurse efficiency and job satisfaction**
- **Faster** discharge times are achieved, even on weekends and holidays
- Patients receive necessary tools for self-management, leading to **improved patient outcomes**
- Promotes **continuity of care** and cost savings

KEY

THANK YOU FOR SHARING
