

National Healthcare Innovation & Productivity Medals 2026

Congratulations

to our incredible team!

Organised by CHI and supported by the Ministry of Health as well as the Ng Teng Fong Healthcare Innovation Programme, the annual National Healthcare Innovation & Productivity (HIP) Medals recognise local and private healthcare; as well as community/intermediate and long-term care institutions that have demonstrated thought leadership and excellence in healthcare innovation & productivity.

Best Practice Medal Care Redesign

Nurse-Led Blood Glucose Monitoring (BGM) Reduction Protocol

The Nurse-Led Blood Glucose Monitoring (BGM) Reduction Protocol is an innovative, digitally enabled model that empowers nurses to optimise monitoring based on standardised clinical criteria and a Best Practice Advisory integrated within Electronic Medical Record – eliminating unnecessary steps, enhancing patient comfort, improving care consistency, and enabling nursing time to be directed at higher-value patient care. Following implementation, the initiative achieved a 42% reduction in average BGM tests per patient (from 8.53 to 4.96), eliminating over 44,000 unnecessary tests annually. This translated into approximately \$677,000 in yearly cost savings, exceeding \$1.2 million over two years.

L-R: Kenneth Leow, Senior Medical Informatics Specialist, Group Medical Informatics Office; Neo Li Ling, Nurse Manager, Ward B14S; Adj Asst Prof Kurumbian Chandran, Senior Consultant, Endocrinology; Clarice Wee, Deputy Director of Nursing (Lead); Fan JingJing, Senior Staff Nurse, Isolation Ward
